## DIAGNOSTICOS Y DISPLAY DE MENSAGES

DISPLAY	DESCRIPCION
<i>Codigos Referenciales de Velocidad</i>	
CP	CONTROL PAD: The drive speed is controlled by the ▲ and ▼ buttons on the front of the drive.
EI	EXTERNAL CURRENT: The drive speed is controlled by a 4-20 mA signal between TB-25 and TB-2.
EU	EXTERNAL VOLTAGE: The drive speed is controlled by a 0-10 VDC signal between TB-5 and TB-2.
JG	JOG: The drive is in Jog mode and the speed is set by preset speed #2 (Parameter 32).
OP	MOP: Contacts wired to TB-13B and 13C are used to increase and decrease the drive speed.
Pr1 - Pr7	PRESET SPEEDS #1-7: The drive speed is set by the selected Preset Speed (Parameters 31-37).
<i>Indicacion de Estado</i>	
br	DC BRAKING: The DC braking circuit is activated.
CL	CURRENT LIMIT: The output current has exceeded the CURRENT LIMIT setting (Parameter 25) and the drive is reducing the output frequency to reduce the output current. If the drive remains in CURRENT LIMIT for too long, it can trip into a CURRENT OVERLOAD fault (PF).
Er	ERROR: Invalid data has been entered.
GE	"GE" will be displayed if an attempt is made to change the OEM default settings when the drive is operating in the OEM mode (see Parameter 48).
LC	FAULT LOCKOUT: Failed three restart attempts. Requires a manual reset.
SE	SERIAL: The optional remote keypad is active as the user interface instead of the buttons on the front of the drive.
SP	START PENDING: This is displayed during the 15 second interval between restart attempts.
<i>Codigos de Diagnosticos</i>	
AF	HIGH TEMPERATURE FAULT: Ambient temperature is too high.
CF	CONTROL FAULT: A blank EPM, or EPM with corrupted data has been installed. Perform a factory reset (Parameter 48).
CF	INCOMPATIBILITY FAULT: An EPM with a different parameter version has been installed.
dF	DYNAMIC BRAKING FAULT: The drive has sensed the dynamic braking resistors are overheating.
EF	EXTERNAL FAULT: TB-13A and/or TB-13C is set as an external fault input and TB-13A and/or TB-13C is open with respect to TB-2.
GF	DATA FAULT: User data and OEM defaults in the EPM are corrupted.
HF	HIGH DC BUS VOLTAGE FAULT: Line voltage is too high. Deceleration rate is too fast: Overhauling load. Fast deceleration and overhauling loads may require dynamic braking.
JF	REMOTE KEYPAD FAULT: The communication link between the drive and the optional Remote Keypad has been lost. Check for proper wiring and/or noise.
LF	LOW DC BUS VOLTAGE FAULT: Line voltage is too low.
OF	OUTPUT TRANSISTOR FAULT: Phase to phase or phase to ground short circuit on the output; Failed output transistor: Boost settings are too high: Acceleration rate is too fast.
PF	CURRENT OVERLOAD FAULT: VFD is undersized for the application; Mechanical problem with the driven equipment.
SF	SINGLE-PHASE FAULT: Single-phase input power has been applied to a three-phase drive.
UF	START FAULT: Start command was present when the drive was powered up. Must wait 2 seconds after power-up to apply Start command if START METHOD is set to NORMAL.
F1	EPM FAULT: The EPM is missing or damaged.
FC, F2-Fo	INTERNAL FAULTS: The control board has sensed a problem. Consult factory.

## CONFIGURACION DEL VARIADOR SCL/SCM

### Modo de Entrada del Programa :

Para accesar a los parametros, aprete el boton **Mode**. Este activara la clave secreta. El display leera "00" y a la derecha los decimales . Use los botones **▲** y **▼** para llegar a la clave secreta (La clave secreta de fabrica es 225) y aprete **Mode** para entrar.

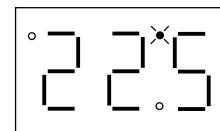

Apriete **Mode**

Display lee "00"

A la derecha los puntos decimales

Use **▲** y **▼** para llegar a la clave secreta (la clave de fabrica es 225)

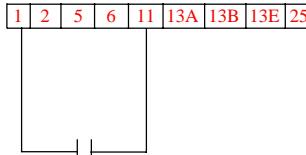

Aprete **Mode** para entrar la clave

Entonces el PROGRAMA es accedido, use los botones **▲** y **▼** para ver los diferentes parametros (P01), y apriete el boton **Mode** para ver los diferentes opciones. Use los botones **▲** y **▼** para cambiar el parametro elegido y apriete el boton **Mode** para almacenar el nuevo programa

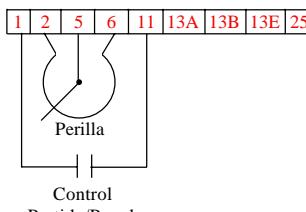

### Conecciones:

Abajo hay un ejemplo diagrama para control de partida y parada (start/stop). El variador esta listo para su uso, con esta conexion de control no se necesita ajustar ningun parametro para funcionar. La variacion de se hace a traves de los botones **▲** y **▼** que estan al frente del variador.
